

## **The Mini WAVE loom**

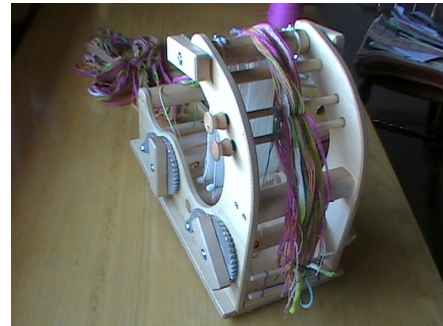

**The Wave Instructional Video uses the Big Wave as a model. You can download a Quick Time version from the "Wave Series Looms" page of [gilmorelooms.com](http://gilmorelooms.com) or watch "Wave Project Part 1" (<https://www.youtube.com/watch?v=57zb2dC9CIE>) and "Part 2" (<https://www.youtube.com/watch?v=9ChTaGWoXZ8>) on YouTube.**

**It is best to view the video and then look at the following pictures which are specific to the Mini Wave.**

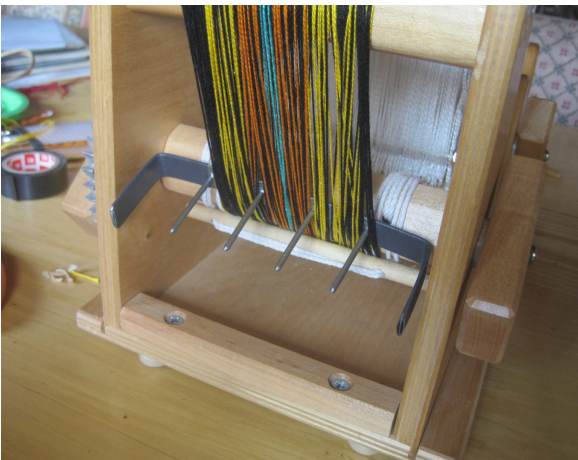

Put the Lease sticks through the "cross" you created on the warping frame.

Tie on the 2nd tie bar and put the tie bar through the loop of your warp.

The 3 Sectional Strips replace the older "U" brackets that came with a Mini Wave. Place the Sectional Strips in the warp as you start to wind the first wrap of warp fibers around the Beam. Even them out about every 1/3 of the way around. Try to keep your warp confined within the sections you start putting it in. Keeping it within the outer pins is the most important so it does not spread out. In the middle sections it is not as important to make it always stay in a certain section. Try to keep the end of the Sectional Strips from rubbing on the inside of the loom. You can bend them inward too.

**To complete the setup review the Wave video for tying your warp to the Cloth Beam and "Setting" your weaving start.**
